

Software Requirements Specification

E-commerce Seller Dashboard

Document Version: 1.0

Last Updated: January 13, 2025

Status: Draft

Executive Summary

This document outlines the complete software requirements for a web-based Seller Dashboard designed specifically for e-commerce operations across multiple African countries. The system enables sellers to manage products, process orders, handle shipping, and track payments through an intuitive interface.

Table of Contents

1. System Overview
2. Core Features
3. User Types & Access Levels
4. Detailed Requirements
5. Technical Specifications

1. System Overview

1.1 Purpose

The Seller Dashboard serves as a centralized platform for e-commerce sellers operating across multiple African countries. It streamlines inventory management, order processing, and customer communication through an integrated web interface.

1.2 Key Benefits

- Centralized management of multi-country operations
- Real-time inventory tracking across warehouses
- Automated order processing and confirmation
- Integrated payment and refund handling
- Professional customer support system

2. Core Features

2.1 Authentication & Security

Login System

- Secure email/password authentication
- Two-factor authentication option
- Role-based access control
- Session management
- Password recovery system

2.2 Product Management

Product Creation Requirements

- Warehouse Location (Country-specific)
- Product Code (Seller-generated)
- Variant Code
- Verification Link
- Product Description

Stock Management

- Automatic stock updates
 - -1 for confirmed orders
 - +1 for returns
- Real-time inventory tracking
- Stock history logging
- Low stock alerts

2.3 Order Management

Order Processing

- Manual order entry
- Bulk import via CSV/XLSX
 - Template-based import
 - Column mapping
 - Validation checks
- Order status tracking
- Call center confirmation system

2.4 Warehousing & Shipping

Warehouse Management

- Multiple country support
- Location-specific inventory
- Stock transfer tracking
- Warehouse capacity monitoring

Shipping Operations

- Order fulfillment tracking
- Delivery scheduling
- Status updates
- Return processing

2.5 Financial Management

Payment Processing

- Payment history tracking
- Transaction details
- Multiple currency support
- Refund processing

Financial Reporting

- Revenue reports
- Payment reconciliation
- Refund tracking
- Financial analytics

3. User Types & Access Levels

3.1 System Roles

Seller (Standard User)

- Product management
- Order processing
- Shipping coordination
- Payment tracking
- Support ticket creation

Administrator

- System configuration
- User management
- Global settings control
- Analytics access

Support Team

- Ticket management
- Customer communication
- Order issue resolution
- Return processing

Call Center Team

- Order confirmation
- Customer verification
- Status updates
- Communication logging

4. Detailed Requirements

4.1 Product Module

Product Information

- Basic Details
 - Product name
 - Description
 - SKU
 - Variant details
- Pricing Information
 - Base price
 - Promotional pricing
 - Bulk pricing options
- Inventory Data
 - Stock levels
 - Warehouse allocation
 - Minimum stock alerts

4.2 Order Processing

Order Types

- Standard orders
- Bulk orders
- Special requests
- Returns

Processing Steps

1. Order receipt
2. Verification
3. Call center confirmation
4. Warehouse assignment
5. Shipping arrangement
6. Delivery tracking

4.3 API Integration

API Features

- Secure authentication
- Order creation
- Product updates
- Inventory sync

Documentation

- Integration guide
- API endpoints
- Example requests
- Response formats
- Error handling

5. Technical Specifications

5.1 System Requirements

Web Application

- Modern web browser support
- Responsive design
- Mobile compatibility

5.2 Security Measures

- Data encryption
 - Secure API endpoints
 - Regular security audits
 - Access logging
 - Data backup
 - Disaster recovery
-

Appendix A: Glossary

- **SKU:** Stock Keeping Unit
- **API:** Application Programming Interface
- **CSV:** Comma-Separated Values
- **XLSX:** Excel Spreadsheet Format
- **2FA:** Two-Factor Authentication
