

Boxology Update Summary

This update brings a more polished and user-friendly experience across the app, along with several important feature additions and safety improvements. Below is a breakdown of what's been changed or added.

What's New and Improved

1. Refreshed App Design

- **Updated Logo and Fonts**
The app now features a new logo and cleaner fonts for a more modern and consistent look.
 - **Redesigned Chat Page**
The Chat interface has been improved to make conversations easier to follow and more visually appealing.
We also updated the loading state while the model is generating answers, so users clearly know when a response is on the way.
-

2. Safer Interactions

- **Confirmation Modals Before Deleting**
We've added confirmation prompts before performing any destructive action—like deleting chats or companies. This helps prevent accidental deletions and gives users more control and peace of mind.
-

3. Chatbot Improvements

- **Preset Values for Bot Creation**
Default values are now included when setting up a new chatbot, making it faster and easier to get started.
- **Chat Enhancements**

- Users can now **delete individual chats** directly from the chat interface.
 - The bot's responses now handle **code blocks and markdown formatting** much better, improving the readability of technical content.
 - **Rename Chat Feature**

Chats can now be **renamed** easily for better organization.

A clean inline edit interface is provided, with keyboard support (e.g. pressing Enter to confirm changes).
-

4. Knowledge Base Updates

- **Improved Document Deletion**

When a document is deleted from the knowledge base, all of its related segments are automatically removed. This ensures a clean and consistent knowledge environment.
-

5. Company Management Enhancements

- **Soft Delete for Companies**

When a company is deleted, it is now **soft-deleted** instead of being removed permanently. This allows for safe recovery in case of mistakes.
- **Deleted Companies View**

Admins can now view all soft-deleted companies in a dedicated section. From there, they can:

 - **Restore** a company if it was deleted by accident.
 - **Permanently delete** the company, which will also remove all associated users. Each action includes confirmation dialogs to avoid unintentional loss of data.
